**ITraining Quest is a website designed as a game-style learning platform created to support IT students and aspiring IT learners in their study of Introduction to Computing. Its main goal is to gather all course-related content and study materials into a single, organized, and easily accessible space, making navigation smoother for students. By combining structured lessons with interactive features, it aims to enhance understanding while making the learning experience more engaging, enjoyable, and efficient.**

- The 'Home' section includes an interactive button that links directly to an external app called "Gizmo," where the quizzes are hosted.
- Each quiz includes a leaderboard feature that displays user rankings based on their scores.
- The website also offers a Discord Community Server where users can ask questions, share tips, and discuss lessons with fellow learners.
- Modules on the website link to downloadable PDF files, allowing users to access the materials offline.

**The project seeks to make learning more straightforward while also reshaping how students connect with essential IT concepts. By blending organized course materials, interactive components, and a user-friendly design, the platform delivers a more engaging and dynamic learning experience. In the end, it functions as a complete learning companion that fosters consistent study habits, motivates user involvement, and strengthens students' foundational knowledge in Information Technology.**
