

BACHELOR OF SCIENCE IN INFORMATION TECHNOLOGY

COMP 101: INTRODUCTION TO
COMPUTING

Juanito P. Alvarez Jr., MIT

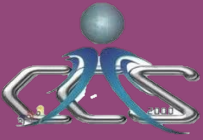

INTRODUCTION

ItrainingQuest is a website with quizzes for learning, for now and future IT students studying Introduction to Computing. It contains all of the materials and resources for each course so students can easily access everything in one place and navigate through it. ItrainingQuest was created to help make studying fun, interesting and easier for students by providing about the learning process combined with some form of interactive quiz.

UNIQUE FUNCTIONALITY

The unique features of ITrainingQuest are a result of its community-based help system. ITrainingQuest does not have a static FAQ page, rather users have access to real-time assistance from the many Discord user communities (There are many community-based Discord channels available). As an added bonus there are also dedicated chat channels where users can communicate using their voice during a live stream session. The community aspect creates a culture of engagement and allows students to interact and collaborate on lessons in an experiential learning environment where learning is more than just reading materials.
